

Keshav Goel

US Citizen | (201) 895-8340 | kgoel9657@gmail.com | linkedin.com/in/goel-keshav | keshavgoel.dev | github.com/keshavgoel787

EDUCATION

Northeastern University
Bachelor of Science in Data Science | GPA: **3.8/4.0**
Coursework: Data Structures, Algorithms, Database Systems, Machine Learning, Computer Vision, Natural Language Processing, Linear Algebra, Probability Theory, A/B Testing

Expected May 2028
Boston, MA

TECHNICAL SKILLS

Languages/Frameworks: Python (FastAPI, Flask), JavaScript/TypeScript (React, Next.js, Node.js), Go, Java, C++, R, SQL
Databases/Cloud: MySQL, Snowflake, AWS (EC2, S3, Lambda), Docker, Kubernetes, Terraform, Jenkins, Git, CI/CD, REST APIs
ML/AI: Claude Code, PyTorch, Scikit-Learn, Pandas, NumPy, HuggingFace, LangGraph, MCP, Bedrock, Ollama, OpenCV
Concepts: Agent Orchestration, Prompt Engineering, Deep Learning, Computer Vision, Statistical Modeling, ETL Pipelines

EXPERIENCE

Amazon Web Services (AWS)
Software Development Engineer Intern

Aug 2026 – Present
Seattle, WA

- Design an agentic AI advisor guiding engineers to scope cloud access requests, targeting a **4-week** review cycle cut to **2 hours**
- Build the advisor on **Amazon Bedrock AgentCore** with **Strands**, grounding via **RAG** over a **164-rule** permission corpus
- Add **Bedrock Guardrails** for prompt-injection and hallucination resistance, plus an eval harness scored against reviewer decisions
- Architect an advisory-only service in an isolated AWS account, extensible across identity platforms from **Entra** to **Google OAuth**

DraftKings
Software Engineering Intern

Jun 2026 – Aug 2026
Boston, MA

- Built a **LangGraph** agent to query **Snowflake** data and generate cost reports across **3** verticals, cutting analysis by **20 hrs/week**
- Architected a typed **StateGraph** for constrained **ToolNode** execution, exposing skills as **@tool** nodes behind a runtime registry
- Shipped to **Kubernetes** via **Flux** GitOps and **Terraform**, with **Cilium** network policies and **Datadog** tracing for **30** analysts

ProcureMate AI
Software Engineering Intern

Jan 2026 – May 2026
Boston, MA

- Designed a computer-vision system counting dental supplies across **20+** offices, eliminating **15+ hrs/week** of work per office
- Implemented a **Node.js** backend with **S3** storage and **Vercel** serverless, detecting **1000+** products in **<30s** per closet
- Combined a **Roboflow** model (**10K+** images) with a **Claude** API fallback, cutting mislabels from **15 to 1** per image

Johnson & Johnson
Software Engineering Co-op

Jun 2025 – Dec 2025
Raritan, NJ

- Built **Node.js** Slack microservices delivering trial data on-demand, eliminating **15 hrs/week** of team-wide manual exports
- Integrated **Microsoft Graph** for **SharePoint** retrieval, deploying on **Kubernetes** for **350** researchers across **30** clinical trials
- Automated log analysis with **AWS Athena** and **S3** across **100K+** daily messages, cutting failure triage from **2 hours** to seconds

WPS Data Lab
Data Science Research Assistant

Oct 2024 – Present
Boston, MA

- Analyzed **257K** EPA violations and **100K+** federal spending records, identifying **12** significant drivers of worker-safety outcomes
- Constructed a **Python** ETL pipeline into **PostgreSQL**, then modeled compliance variation via hierarchical **REML** (statsmodels)
- Second author on forthcoming paper, “*Worker Protection Enforcement: Predictors of Regulatory Vigor*” (in preparation)

PROJECTS

Remetra (NU Generate) | *React, Supabase, FastAPI, Ollama, Neo4j, iOS, Android*

- Shipped a cross-platform (iOS/Android) symptom-tracking app for autoimmune patients, used by **250** users logging **10K+** entries
- Modeled a Neo4j knowledge graph linking foods to symptoms over time, surfacing likely dietary triggers for patients

ForgetMeNot (HackRU 2nd) | *FastAPI, Snowflake, Gemini, Google Cloud, React, OpenCV*

- Built an AI dementia-care platform generating narrated memory experiences — **2nd place** at HackRU among **300** teams
- Assembled a multimodal pipeline with OpenCV facial recognition and voice cloning, reconstructing memories from uploaded media

BreatheEasy (CSBase Hacks 1st) | *Flutter, Dart, Google Maps API, Shelf, Docker*

- Developed a Flutter navigation app routing users along lower-pollution paths — **1st place** at CSBase Hacks among **250** teams
- Designed a Dockerized microservices backend (Dart/Shelf) computing optimal routes balancing air quality, distance, and travel time
