

Keshav Goel

US Citizen | Boston, MA | (201) 895-8340 | kgoel9657@gmail.com | linkedin.com/in/goel-keshav | keshavgoel.dev | github.com/keshavgoel787

EDUCATION

Northeastern University

Bachelor of Science in Data Science | GPA: **3.8/4.0**

Expected May 2028

Boston, MA

Coursework: Data Structures, Algorithms, Database Systems, Machine Learning, Computer Vision, Natural Language Processing, Linear Algebra, Probability Theory, A/B Testing

TECHNICAL SKILLS

Languages/Frameworks: Python (FastAPI, Flask), JavaScript/TypeScript (React, Next.js, Node.js), Go, Java, C++, R, SQL

Databases/Cloud: MySQL, Snowflake, AWS (EC2, S3, Lambda), Docker, Kubernetes, Terraform, Jenkins, Git, CI/CD, REST APIs

ML/AI: Claude Code, PyTorch, Scikit-Learn, Pandas, NumPy, HuggingFace, LangGraph, Ollama, OpenCV, NLTK, Snowflake Cortex

Concepts: Agent Orchestration, Prompt Engineering, Deep Learning, Computer Vision, Statistical Modeling, ETL Pipelines

EXPERIENCE

Amazon

Aug 2026 - Dec 2026

Incoming Software Engineering Intern

Seattle, WA

- Incoming intern scoped to build identity-synchronization and telemetry pipelines across **AWS**, **Azure**, and **Google Cloud**.

DraftKings

Jun 2026 - Present

Software Engineering Intern

Boston, MA

- Built a production **LangGraph** FinOps agent auto-generating cloud-cost reports, exec summaries, and decks across **3** verticals, eliminating **20+ hrs/week** of manual analysis.
- Engineered report-writer module with golden tests and an **LLM-as-judge** evaluation harness with per-scenario token tracking.
- Deployed the agent to production on **Kubernetes** with **Terraform**-provisioned DynamoDB and **Datadog** observability, taking it from local prototype to a live service used by **30** financial analysts.

ProcureMate AI

Jan 2026 - May 2026

Software Development Engineering Intern

Boston, MA

- Built computer vision system for dental supply counting across **20+** offices, eliminating **15+ hrs/week** of manual work per office.
- Implemented **Node.js** backend with **S3** storage, **Vercel** serverless orchestrating detection for **1000+** products in **<30s** per closet.
- Engineered hybrid pipeline with a **Roboflow** model (**10K+** images) and **Claude** API fallback, cutting equipment mislabels from **15 to 1** per image.

Johnson & Johnson

Jun 2025 - Dec 2025

Software Engineering Co-op

Raritan, NJ

- Architected **LangChain** pipeline with **GPT-4o** summarizing **500+** research papers, cut literature review from **2 hrs to 30 min**.
- Engineered **Neo4j** knowledge graph of **100K** disease-gene-drug links powering **GraphRAG**, increasing retrieval accuracy **25%**.
- Constructed **Streamlit** MLOps interface with **FastAPI** endpoints to access **10** wearable health models, cutting infra cost **42%**.

WPS Data Lab

Oct 2024 - Present

Data Science Research Assistant

Boston, MA

- Analyzed **257K** EPA violations and **100K+** federal spending records to identify **12** significant drivers of worker-safety outcomes.
- Built Python ETL pipeline into PostgreSQL generating a **450**-observation state-year panel, then modeled geographic compliance variation via hierarchical REML (statsmodels).
- Contributing author on forthcoming paper, “*Worker Protection Enforcement: Predictors of Regulatory Vigor*” (in preparation).

PROJECTS

Remetra (NU Generate) | *React, Supabase, FastAPI, Ollama, Neo4j, iOS, Android*

- Built a cross-platform (iOS/Android) symptom-tracking app for autoimmune patients, used by **250** users logging **10K+** entries.
- Engineered an ontology knowledge-graph algorithm (Neo4j, Ollama) to surface food-symptom correlations via temporal analysis.

ForgetMeNot (HackRU 2nd) | *FastAPI, Snowflake, Gemini, Google Cloud, React, OpenCV*

- Built an AI dementia-care platform (FastAPI, Gemini, ElevenLabs) generating narrated memory experiences — **2nd place** at HackRU among **300** teams.
- Engineered a multimodal pipeline — OpenCV facial recognition, voice cloning, Next.js dashboards, Snowflake storage — reconstructing memory sessions from uploaded media.

BreatheEasy (CSBase Hacks 1st) | *Flutter, Dart, Google Maps API, Shelf, Docker*

- Developed a Flutter navigation app routing users along lower-pollution paths — **1st place** at CSBase Hacks among **250** teams.
- Designed a Dockerized microservices backend (Dart/Shelf) computing optimal routes balancing air quality, distance, and travel time.
